Project requirements

Name:	Mubarak Abiola Keshiro
Community & UN SDG(s):	SDG 4& 13
Date:	10/21/2023

Project Name	TVARUS

Functional Requirements

-The application should be able to accept user name and save users progress to their device or APPLE ID.
- The application should have list of completed and uncompleted activities linked to the users devices.
- The application should be able to handle real time user interactions for graphical animations
- Notifications to inform users of new challenges and levels

Technical/Performance Requirements

[This section should list the technical requirements for the project (e.g., the required technology infrastructure) and any performance requirements (e.g., the minimum response time).]
- Required technology is IOS or ipados based
-It would need to have semi- impressive performance and response time as there would be potential graphical simulations and interactive challenges.
- It would need to have a very inviting color coordination and easily navigable UI
- It would need analytics and user tracking to monitor user engagement, track progress, and gather insights.
